

TREES & SHRUBS

Homeowners and professionals plant thousands of trees and shrubs each year. Those who plant using a backfill mix with 20-30% TechnaGro™ have greater success of the trees/shrubs reaching maturity.

FOR BEST RESULTS:

- Trees and shrubs should be planted no deeper than the soil in which they were originally grown.
- The hole should be at least 3 times the diameter of the root ball or the spread of the roots
- Position the tree/shrub in the hole so that the trunk base is elevated about 1/3 the size of the root ball.
- Back fill the hole with the mixture of soil/ TechnaGro™ and water thoroughly.
- Compress the soil to remove air pickets, bring up to grade.
- Apply a 2" layer of Amerimulch™ and stake the tree.

STAKING A TREE

- Don't allow a tree to be loose enough that it rubs against the stakes, but loose enough that there is room for the tree to sway in the wind. Remove stakes once the tree is able to stand on its own.

COMMONLY ASKED QUESTIONS

- TechnaGro is bulk product
- Soil Magic is the bulk product refined to a bag
- One 1.2 cubic foot bag applied at 1" covers approximately 15 sq ft.
- Approximately 22 bags equal one cubic yard
- One cubic yard (800-1,000 lbs) applied at 1" covers approximately 324 sq ft.
- Delivery is available at an additional cost.

PLANTING WITH SOIL MAGIC™ AND TECHNAGRO™

Soil Magic

TECHNAGRO™

WHY TECHNAGRO™ & SOIL MAGIC™?

BENEFITS

The highly organic content of TECHNAGRO™ makes it the ultimate choice for soil conditioning in all planting situations. Ideal for mulching, planting bed preparation, shrub & tree backfill, topdressing new lawns and more

You'll achieve unbelievable results; vibrant colors and healthy plants that produce more!

- 70% organic matter
- Environmentally safe; EPA approved for unrestricted use, won't harm children, pets or the environment
- Provides even feeding with long-term, slow release nutrients feeding plants all year

- Loosens soil; breaks up clay and allows roots to penetrate deep for maximum growth. More roots means more food for your plants

- Improves drainage while maintaining proper moisture retention and nutrient levels
- Helps neutralize soil acidity, increasing the nutrients available to plants
- Helps reduce incidence of disease

HOW DO I USE TECHNAGRO™ & SOIL MAGIC™ ?

TOP DRESSING & NEW LAWNS

TOP DRESSING

Give new life to your existing lawn; Topdress annually by applying a thin, even layer over existing turf grass.

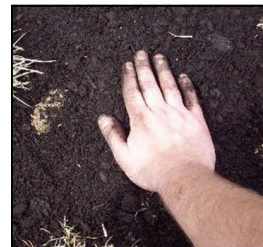

USED ON AREA GOLF COURSES & IN YOUR NEIGHBORHOOD!

Apply (1/8" to 1/2") over turf immediately following aeration. A leaf rake or drag unit should be used to drag TechnaGro™ across turf to allow adequate settling of product into holes and between grass blades. Water thoroughly.

ESTABLISHING NEW LAWNS & BARE SPOTS

No need for starter fertilizer, TechnaGro provides necessary nutrients for fast growth and a healthy turf establishment. Properly preparing landscapes before planting requires less watering later.

Incorporate 1" to 2" of TechnaGro™ to obtain a total soil depth of 5" to 6". Apply the proper type of grass seed and cover with 1/2" of the soil/compost mixture. This will protect the seed from drying and support new grass blades as they begin to reach for the sky! Maintain constant moisture during germination.

FLOWERS, FRUITS & VEGETABLES

SEED & BULB PLANTING

Incorporate 1" to 2" of TechnaGro™ to 4" to 5" of soil to obtain a total depth of 5" to 6" in the planting bed or container. Plant seeds to the required depth and maintain moisture levels.

SEEDLINGS AND PLANTS

Prepare soil as directed above.

FOR BEST RESULTS:

- Water plant in it's existing container to reduce the shock plants go through while adjusting to new environments.
- Try not to disturb any of the roots when removing the plant from the container..
- Cover the root-ball completely.
- Water thoroughly;
